RESUME

Full Stack Developer experienced in building production-ready multi-tenant SaaS and commerce platforms. Strong background in backend API development with Go and PostgreSQL using Clean Architecture principles. Contributed to SSR applications with Next.js, improving performance, SEO, and overall user experience, and supported Docker-based production deployments.

EXPERIENCE

MOOBA AGENCIA Barranquilla, COL

Full Stack Developer *May 2025 – Present*

- Designed and implemented 140+ RESTful endpoints in Go and PostgreSQL for multi-tenant commerce systems, structuring business logic under Clean Architecture to improve scalability, maintainability, and feature delivery speed.
- Contributed to the development of SSR-based commercial platforms with Next.js, achieving Lighthouse scores >90 (SEO) and >80 (Performance), directly improving search visibility and user experience.
- Managed Docker-based deployments and production environments for multiple web applications, reducing incident resolution time and ensuring stable releases across frontend and backend services.

Selected production projects (team contributions):

- mooba.co · tasqui.com · thermecs.co (Next.js + Strapi CMS Integration)
- bed.mooba.co (Go, Clean Architecture, multi-tenant)

UNIVERSITY Barranquilla, COL

Researcher and developer *2023 – 2024*

- Developed software modules for robotic monitoring, integrating frontend interfaces with hardware and sensors, and implemented basic computer vision processing, collaborating software–hardware projects.

PROJECTS

Point of Sale (POS) — NestJS, TypeORM, PostgreSQL

- Designed and implemented a modular REST API with authentication, validation, modeling relational data in PostgreSQL and simulating real-world business workflows such as sales and inventory.

Product manager API — Node.js, Express, PostgreSQL

- Built a documented and tested REST API applying middleware patterns, validation, and centralized error handling, and designed a normalized PostgreSQL schema integrated with a React frontend.

Drink Recipe Finder — React + APIs + LLM

- Developed a web application integrating external APIs and an LLM using OpenRouter for intelligent recipe queries, managing global state with Zustand to improve performance and user experience.

EDUCATION

UNIVERSIDAD AUTONOMA DEL CARIBE Barranquilla, COL

Mechatronics Engineering. *Mar 2025*

Thesis: Drone System for Pest Detection in Cassava Crops with Custom TensorFlow Lite Model.

SKILLS & INTERESTS

Technical: Go, Node.js, NestJS, Express, PostgreSQL, SQL, Supabase, REST API, Clean Architecture, Testing (Jest, Supertest, Zod), Next.js, React, Git & Github, Basic CI/CD, Docker and VPS deployment.
Language: English B2 and Portuguese A2
Interests: Java and Spring Boot
