RESUME

Software Engineer with experience building scalable multi-tenant systems and high-performance APIs. Specialized in Node.js (NestJS/Express) and Go, with a strong focus on Clean Architecture and relational data modeling in PostgreSQL. Proven ability to manage production environments using Docker and maintain robust commerce workflows, including RBAC and payment integrations.

EXPERIENCE

Full stack developer at **mooba Agencia** from **May 2025 to present:**

- **Go & Node.js API Development:** Engineered a modular multi-tenant commerce backend with 140+ RESTful endpoints using Go, while simultaneously maintaining and expanding legacy core services in Node.js to ensure feature parity and system stability.
- **Architecture & Data Modeling:** Designed relational schemas and business workflows for inventory, order lifecycles, and webhooks using PostgreSQL and Clean Architecture principles.
- **DevOps & Reliability:** Orchestrated Docker-based deployments and production environments on VPS, enhancing system observability and release stability for distributed SaaS platforms.
- **System Integration:** Successfully integrated Next.js with Strapi CMS and built real-time telemetry modules for production-grade projects (mooba.co, tasqui.com, an others..).

Researcher and developer at **University** from **January 2023 to December 2024:**

- **AI & Robotics:** Developed software modules for robotic monitoring using Python, integrating hardware sensors with computer vision processing for crop analysis.

TECHNICAL PROJECTS

BioFood Connect — Go, Claude API, Evolution API (WhatsApp), PostgreSQL, Docker

- Built a Hexagonal Architecture backend in Go in 48 hours for a Hackathon-winning MVP, integrating Claude Haiku for AI WhatsApp queries, proactive alert workers, and a Wompi/Nequi payment flow.

Point of Sale (POS) — NestJS, TypeORM, PostgreSQL

- Designed and implemented a modular REST API with authentication, validation, modeling relational data in PostgreSQL and simulating real-world business workflows such as sales and inventory.

Product manager API — Node.js, Express, PostgreSQL

- Built a documented and tested REST API applying middleware patterns, validation, and centralized error handling, and designed a normalized PostgreSQL schema integrated with a React frontend.

EDUCATION

Mechatronics Engineering from **Universidad Autónoma del Caribe** at **Barranquilla, Col.** on **March 2025**
Thesis: Drone System for Pest Detection in Cassava Crops with Custom TensorFlow Lite Model.

SKILLS

Technical: Go, Node.js (NestJS/Express), SQL, Python (TensorFlow/AI), Java (Spring Boot - in progress)
Tools: PostgreSQL, Docker, Git, CI/CD, Supabase, Linux/VPS, Clean Architecture, RAG/LLM, Testing (Jest, Supertest, Zod).
Language: English (B2) and Portuguese (A2).

AWARDS & ACHIEVEMENTS

1st Place Winner – Caribe Tech Arena Hackathon (Biofood Challenge), Barranquilla, Col. (May 2026).
Selected as the top solution among regional builders for outstanding technical execution, hexagonal backend architecture, and MVP utility.
